**Subject: Chemical Park Tagil**

Dear Sir / Madam,

By the present letter may I introduce for your attention industrial park "Chemical Park Tagil".

Located on the border between Europe and Asia, in Sverdlovsk Region – one of the five most stable areas of the Russian Federation in the list of economically comfortable regions for investments – our industrial park is considered one of the key prioritized directions of Region development. Significant support from the regional government in line with continuous activities on park infrastructure improvement and excellence are targeted at keeping the conditions economically and socially attractive for current and future Residents.

Chemical park Tagil is based on the territory of JSC Uralchimplast – a 75-year experienced production mill in the chemical industry sector – which in the first stance defines the key specifics of the park activity line. Industrial park provides an "all inclusive" package for the Residents – industrial brownfield connected to all communications and energy resources; up-to-date biological water treatment and liquid waste heat treatment systems; well-developed infrastructure; truck- and railway roads availability on the park territory – these are just the first items of the full list which could be tailored personally for every single Resident to support quick start-up of a project and reduce the primary investments by 30-40%.

Major targets of the Park managing company are to provide all types of support and supplementary services to Residents so that they could focus on the key tasks – R&D, marketing, production and sales.

More details are available at [www.chptagil.com](http://www.chptagil.com), as well as managing company specialists are always open to dialogue and are ready to answer any questions.

Sincerely,

Igor A. Gerdt  
First deputy general director –  
"Chemical park Tagil" executive
